Technology Alignment — Detailed, Independent, Secure

Each organization faces unique challenges in their IT environment. Business reorganization and growth, M&A activity, disconnected hardware and software procurement strategies, performance degradation and version upgrades - all contribute to the uniqueness. However, the same challenges also represent very significant opportunities. Understanding and addressing them can often lead to significant reduction in TCO, greater efficiency and happier customers.

Axiom's Technology Alignment is designed to help you realize such opportunities by making independent third-party recommendations about your IT Infrastructure. Each alignment also addresses common dilemmas related to improving security, minimizing risks and lowering costs while enhancing productivity. Our team will locate vulnerabilities, diagnose your critical pains and recommend solutions to truly align IT systems with your strategic business objectives.

Did you know?

Recent innovations in hardware infrastructure technology, in concert with enhanced application design and business processes, have enabled organizations to do more than ever before. Yet most organizations have not been able to take advantage of these developments.

- While the cost of a computer calculation has declined six-fold in recent years, IT spending as a percentage of capital assets has grown three-fold.
- Today's average system utilization rates are approximately 12%.

IT Infrastructures are unable to adapt and support business model innovation and as a result IT becomes an inhibitor to rapid, dynamic change rather than an enabler.

Comprehensive report with objective information on...

- System architecture and topology
- Application integration & data exchange
- Time-to-access and utilization metrics
- Disaster Recovery, Business Continuity
- Administration and Management
- Green initiatives, such as power consumption and environmental footprint
- Available options for virtualization, consolidation and reducing TCO.

Gain a new perspective

Axiom's team brings the necessary resources and expertise to help you evaluate and reach your goals. Our deliverable is a fresh, analytic and unbiased report on which you can base important decisions.

Axiom does not resell hardware, so we are able to make recommendations that provide a truly independent point-to-point comparison between your existing systems and the leading products and solutions in the industry.
